Who We Are

HG Walls is in the business of delivering value added exterior facade, aluminium windows, interior and architectural design and execution projects for the wide profile of corporate, commercial and residential clients. In our drive to deliver innovative and practical solutions to our customers, we utilize our experience in exterior cladding, interior design, space planning, project management and execution.

Our strength of proficient execution are backed by experience of our in house designers and project managers with rich experience in designing, planning and project execution.

Our competitive advantage is that we are able to deliver on any size project, while providing with a unique service offering tailored to clients' needs and requirements.

Our services cover the entire spectrum needed for a smart exteriors, aluminium windows and interior, right from design conceptualization to total Fit-out & Turnkey projects. We have built a credible reputation as one of the most reliable service providers, with a rich portfolio in the Corporate, Commercial and Residential sectors and created world class environments for occupiers of these sectors.

Our Vision

Our company's objective is to achieve the limit beyond technology in creation of architectural work of distinction for facade cladding and glazing with an emphasis of aesthetic pleasing and innovative design.

Our Mission

To be the Market Leader by providing complete project solution through commitment and innovation coupled with drive and quality therefore ensuring fast and effective project management.

Our Services

Project Estimation

Our in-house Sales and estimating department is able to provide early stage support for all Architects, Consultants and Contractors to help develop their aspirations into realized solutions. Our System Designers and Engineers are available to develop early stage architectural intent into engineered solutions to meet the demands of all modern day facades, aluminium windows and interior designs. We are able to offer commercial advice and support at the earliest possible phase of a project so that budget expectations are understood by the client team from the very outset. Value-engineered solutions can be proposed in parallel offering the client choices as designs evolve.

Design & Engineering

The design of quality, unitized facades and interior requires a high level of technical ability and experience. At HG Walls we have some of the most technically competent and experienced people in the business. Our specialist facade System and Interior Design Office can take a facade and interior designs from concept to reality, no matter how challenging. Supported by our own in-house facade and interior team, structural engineers, facade and interior designs are tailored to suit individual project performance specifications and aesthetic requirements.

Project Management

At HG Walls we know the key to a successful project is careful planning, communication and, above all else, experienced specialist facade and interior project management. All of our project managers are experienced and our management structure ensures that each project team has hands-on support and guidance operationally at director level. For us, a successful project starts even before it is awarded. Right from the beginning, our operations staff is involved actively in all tenders to ensure our client proposals are based on well-thought-out programmes, and that our logistics and installation methodologies are tailored to the particular project challenges and constraints. By doing this, if we are successful then both our clients and our team have the confidence that our schemes are based on sound planning and workable methodologies.

Production

Quality and production expertise is the very foundation of the HG Walls this can be seen in every hall and every product. We look forward to welcoming clients and potential clients alike and giving you a guided tour of this impressive facility.

Testing

Our in-house R&D Department carries out certified project-specific testing of system parts, such as impact testing of glass, cyclic testing of vents and many other types of tests which are often required when designing bespoke systems that must comply with the various standards and regulations. Our department also carries out testing to prove the air permeability, water resistance, and structural integrity of the system prior to going to full production.

Installation

Delivering High Quality Facades and Interiors on Time, Safely

At HG Walls we understand just how important the planning and management of the installation phase is to the successful handover of a completed high quality facade and interiors to our clients, safely and on time. For this reason, our planning starts from the very first project meetings, and our installation managers are engaged early on in the process to ensure their valuable experience is fed into our design, planning and logistics strategies.

Tried and Tested Installation Techniques

Our innovative installation methodologies are tried and tested, and tailored to suit individual project constraints. Installing unitized curtain wall at height, aluminium windows and interior work is our core business and, as such, we have robust systems to manage and control all aspects of our installation activities.

Excellent Safety Records

Safety is at the heart of everything we do. We allocate a full-time safety manager to each of our major projects, not only to ensure our own works are installed safely but also to engage actively with the client teams and those of our fellow trade contractors, making sure the whole site environment is one where everyone can go home safe at the end of their job

Maintenance and After Sales

HG Walls has its own dedicated service team which carries out a full range of maintenance and after sales works to the building envelope, ranging from the replacement of a single pane of glass through to the re-cladding of an entire façade and reworking on the interior work which was carried out earlier. With our specialist knowledge and equipment, we are able to undertake the most complex of repairs with minimal disruption to the building occupants.

Dealership

HG Walls is a dealer for SAINT GOBAIN glass
